

JavaScript Lab4

- 1- Write a Constructor function for Employee (`name,department,salary`) contains setters , getters for Salary (`Salary is private`) and `toString` function to display Employee data on console
- 2- Create array of 5 Employees
Then loop using prompt to take every Employee data from user
Each Employee Data will be in one prompt as follow
Example "`Mona , SD, 2100`".
- 3- Sort them according to Department `Ascending` then by Salary `descending`.
- 4- Filter Employees with salaries greater than 2000.
- 5- Get the highest employee's salary in each department without knowing departments name (`BONUS`)
- 6- Write web page when user open it, page displays increasing counter on page title this timer will stop after 10 seconds.
